

FEEL THE HEAT!

DragonFire Quick Release Steering Wheel Kit

Congratulations on your purchase of the DragonFire Quick Release Steering Wheel Kit! With race inspired looks and material this is a great addition to any UTV. The Quick Release hub makes it a breeze to pop your steering wheel on and off, making for more room when getting in or out as well as serving as a great theft deterrent. Be sure to check out the full line of DragonFire Accessories for your vehicle at your local authorized dealer or online at <http://www.DragonFireRacing.com>

Disclaimer

Off road activities can be hazardous and could lead to injury, dismemberment, paralysis and death. No warranty of representation is made as to the products ability to protect the user from any injury or death. The user assumes that risk. The acceptance and /or use of this merchandise purchased from DragonFire by the customer hereby shall release DragonFire from any and all liability pertaining to the use of such merchandise.

Step 1: Place vehicle on a flat and level surface. Place gear selector in "Park" and remove keys from the ignition.

Step 2: Remove steering wheel per Factory Service Manual instructions.

Note: If hardware is not supplied with spline adapter, retain factory hardware to be re-used. Make sure to inspect back of steering wheel for factory washers that may be adhered to the wheel.

Step 3: Holding new spline adapter with the tapered end towards steering shaft, align the splines and slide into place. Secure the spline adapter to the shaft using supplied hardware (or factory hardware if hardware was not supplied) per the Factory Service Manual. (Figure A)

Note: Supplied hardware may have one side machined flat. Machined side must be installed towards the spline adapter for quick release to fit.

Step 4: Remove all allen head bolts on quick release hub using 1/8" allen wrench. (Figure B) You may need to push center cap out from backside of hub and re-align it so that logo is straight, then press back in. (Figure C)

Step 5: Place new steering wheel over hub and re-install all allen head bolts. Torque evenly to **19 in-lbs.** (Figure D)

Step 6: With front tires straight, align steering wheel and hub with spline adapter. Push onto steering shaft until you hear a slight click. (Figure E)
Test wheel by pulling towards you before use.

Step 7: To remove steering wheel depress collar on hub towards backside of wheel. While holding collar depressed, pull the complete assembly towards you. (Figure F)

Step 8: This completes installation. Time to ride and enjoy!

ProTip: Periodically check all hardware and re-tighten if needed.
