Removable LED Dome Light Kit

Blue/Black

Congratulations on your purchase of the DragonFire removable LED dome light. We have come up with a simple battery powered removable dome light that will make your UTV riding experience a whole lot better. A stainless steel mount installs in a snap and holds a very cool LED light; don't be in the dark any longer! Be sure to check out the full line of DragonFire Accessories for your vehicle at your local authorized dealer or online at <http://www.DragonFireRacing.com>

- Read and understand these instructions before installing product
- Do not cover ANY warning Labels with light mount
- Installation may result in damage to powder coat or paint
- Mount does not promise retention of light in roll over or extreme situations

Tools Required
Side Cutters

### Disclaimer

Off road activities can be hazardous and could lead to injury, dismemberment, paralysis and death. No warranty of representation is made as to the products ability to protect the user from any injury or death. The user assumes that risk. The acceptance and /or use of this merchandise purchased from DragonFire by the customer hereby shall release DragonFire from any and all liability pertaining to the use of such merchandise.

**Step 1:** Place vehicle on a flat and level surface. Place gear selector in "Park" and remove keys from the ignition.

**Step 2:** Remove all pieces from packaging and locate the stainless steel mount and two zip ties. Installing zip ties through backside of the mount, in through one side, up and out through the other. (See Figure A)

**Step 3:** Locate a desired spot for installation (we recommend mounting on horizontal cage tube). To install, place the backside of the mount firmly against tube surface and secure it with zip ties. Once the mount has been securely fastened, trim off excess zip tie material with Side Cutters. (See Figure B)

**Step 4:** Slide LED light in through the side and center within the mount. Your light is now ready for use! It can be removed and replaced multiple times. (See Figure C & D)

**Note:** If the mount is too loose, squeeze the ears of the mount together to achieve desired hold of LED light. If the mount is too tight, pull the ears apart.

**Step 5:** This completes the installation. Time to ride and enjoy!

**Pro Tip:** Be cautious of sharp edges on mount, always wear gloves and protective gear while riding.
